RE : Recommendation for Mr Noe BOULUD

Dear Madam / Sir, dear colleagues,

I am very pleased to write this letter to warmly recommend Mr. Noé Boulud, whom I supervised during a research project at the Medical Image Processing Laboratory (MIPLab) at EPFL, in collaboration with the Laboratory for Behavioral Neurology and Imaging of Cognition at Campus Biotech in Geneva.

Noé has a particularly interesting profile at the intersection of computer science and neuroscience. Although his background is primarily in information systems, he quickly developed a solid understanding of neuroscientific concepts and was able to engage with them in a rigorous and meaningful way. In a short time, he reached a level of credibility that allowed him to contribute effectively to an interdisciplinary research project. Specifically, he managed to learn to use and apply various statistical and informatics tools to analyse not only movie material but also functional MRI data acquired in a neuroscience study on emotion, and in parallel successfully grasp and discuss advanced concepts in relation to brain function and affective processing – an achievement that few students at this early career stage typically achieve.

He has a broad range of computer science skills, including working with complex datasets, designing analytical pipelines, and applying statistical models to extract meaningful insights. Beyond implementation, he has been remarkably able to interpret results and draw relevant conclusions.

Noé combines strong analytical skills with an excellent ability to communicate his reasoning. His presentations were consistently clear, well-structured, and pedagogical, making complex material accessible to a variety of audiences.

He also demonstrated a high level of autonomy and adaptability. He took ownership of his work, navigated uncertainty, and consistently delivered thoughtful and well-structured results.

On a personal level, Noé is a very pleasant person to work with. He integrated well within the team and contributed to a positive and constructive working environment.

Overall, Noé is a rigorous and thoughtful student with strong analytical and communication skills. I am confident that he will thrive in demanding and collaborative environments. I would be more than happy to have new occasion to work with him in the future if his career path brings him again close to our field.

I therefore recommend him more than warmly without reservation.

Please do not hesitate to contact me directly for any further information.

Sincerely yours,
